Experience.
Knowledge.

Yardney Centrifugal Sand Separators are ideal for removal of suspended solids and inorganic materials with a specific gravity of 2 or greater. This highly effective system will provide consistent, simple removal of inorganic material down to 75 microns. Easily installed, these carbon steel units are rated to 150 psi with threaded or flanged inlet/outlet connections. Smaller models are designed for vertical installation while larger models are angled and floor or ground mounted.

Sizing must be within the specified flow range for proper centrifugal action. Larger flow separators and custom designed systems are available.

Applications

- Removal of sand, rock, grit and other inorganic contaminants to protect drip and micro-irrigation systems with fine removal down to 200 mesh or 75 microns
- 150 psi standard operating pressure (high pressure systems available)
- Flow ranges from 4 gpm
- Removal of solids with a specific gravity of 2 or greater
- Serves as an excellent pre-filter to allow for improved sand media or screen filter performance by removing the gross solids from the water source

Advantages

- Sand removal efficiency of 98% of solids down to 200 mesh or 75 microns
- Multiple units in series provide higher efficiencies of filtration
- Units are available in ASME code or non-code construction
- Available with a manual or automatic solids purge valve system
- Special alloys and coatings are available for prolonged life in required applications
- Made in USA

SPECIFICATIONS | CENTRIFUGAL SAND SEPARATOR | Vertical

Model	Minimum Flow		Maximum Flow		Inlet/Outlet NPT Threaded	Purge Port	Particle Size Maximum

Liquid/solid mix enters unit tangentially, inducing centrifugal action

Centrifugal action moves heavier particles to sides of the separator

Solids drop into the collection chamber and are then purged as required

Clean water is drawn out through the separator's vortex action

Standard assembly includes:

- Welded carbon steel
 - Vertical models include female threaded inlet and outlet connections and a threaded purge port for purging of contaminants or hookup of automatic flush valve
 - Angled models include flanged inlet and outlet connections and a threaded purge port for purging of contaminants or hookup of automatic flush valve

Available options:

- ASME code
- High pressure
- Special metal alloys and coatings for extended product life
- Ability to disassemble unit for inspection through flanged manways
- Automatic purge valve for flushing of filter
- Wall mount kit on smaller units
